

My Report On my Computer Lab Project

martins Ogowuihe

June 2024

0.1 abstract

This reports highlights all my steps i put into creating my project and my weakness and strength . I used HTML and CSS style codes to develop my project, with the help of visual studio codes it was made easy and faster . I had access working with my codes and also seeing it reflect on my website in real time.

0.2 Introduction

My portfolio website took a simple approach of a simple website. I choose this structure because any company or reader will find it easy to understand. I didnt use any templates it was all designed by me. My design choice was a brownish background to make my text more visible to read. I also added some button features when tap on it will redirect the reader to a particular text section you want to read. My portfolio highlights a formal introduction about me, my hobbies, my educational history and how to contact me. For my style i used style.CSS on visual studio code to make my portfolio website more presentable.

0.3 Second Section

This section covers the tools and technology i used for my computer lab project. The first tool i used was HTML(Hypertext markup Language)used globally to create and design web sites .Another tool i used to assist my work was CSS(cascading styles sheet) the both tools combined made my work so much easy and faster. With the help of visual studio code i was able to arrange my codes in a more meaningful and understandable way.Hosting my website was done with the help of Git hub. google and safari can be used to open my website link.My Cv was made from a template in overleaf, the template i choose help me express my self and my achievements.

0.4 Third Section

Strength My strength during this project/program was understanding the codes and how to work with them.I also had a strong understanding of the task and objectives. For things i didnt understand i went back to the previous class PDFs and class recording to get more information .I also conducted personal research out side what my teacher taught. my biggest strength was understanding how to use the tools and technology effectively.

Weakness

Poor time management was my biggest issue because i failed to manage my tym effectively

poor communications skills: i will work more on my communication Skill because i failed to ask questions in areas i didnt understand

Going simple and not complex: i see it as a weakness because i went the easy way other than adding more features outside what i was taught by my teacher

Wasting a lot of time on some questions i didnt understand

0.5 fourth section

This sections holds links to my Git hub repository and portfolio web page <https://mart23333.github.io/> link to my web page, <https://github.com/mart23333/mart23333.github.io.git> link to my git hub repository
